

Job offers

If you are looking for an opportunity to advance your career and if you are interested in joining a fast growing high technology company on the leading edge of technology innovation, it is time to contact us. We offer competitive salaries, including a performance bonus.

Current offer: Optics Design Engineer

Job description

KEY JOB RESPONSIBILITIES:

The optical design engineer is responsible for designing optical components and optical subassemblies.

Work as a member of a multi-disciplinary team of design and production engineers to ensure that products designed meet performance specs, schedule commitments, and yield, cost, and quality targets.

SKILLS/QUALIFICATIONS:

- A detailed understanding of manufacturing processes and micro system technology is required as well as the application in data communication systems
- Optical design is done using sophisticated software packages like Zemax.
- The optical design engineer must also have good mechanical lab skills to perform hands on testing of products.
- Strong communication and documentation skills will be needed
- Strong physics understanding, therefore, able to do theoretical analysis, both optical and electrical
- Must have at least 2-3 years of experience in a manufacturing environment, preferably in optical design of lens laser systems
- B.S. M.S. or Diploma in electrical engineering or Physics required
